and Alternative Funding

# A New Vision for Road Usage Charges

- **Motorist Choice of Reporting Methods.** Enable motorists to choose the methods and technologies for reporting their mileage
- **No Mandate for GPS.** Enable options for wireless reporting of *undifferentiated mileage* from the odometer subsystem and *differentiated mileage* from technologies with vehicle location capability
- **Open Technology Platform.** An open system for data collection that allows technologies to evolve with motorist preferences
- **Public Private Partnerships.** Tap into market forces to allow the public to *choose* either government or private sector provision of on-vehicle technologies, data collection and payment services.

## What is an *open system*?

***An open system*** is an integrated system based on common standards accessible by the marketplace whereby components performing the same function can be readily substituted or provided by multiple providers
